	Tible: Macro: Processor.
	Problem Cl. 1. A. Cl. 1. A
	Problem Statement: Study ossignment for main
	processor
	Objective:
	i) To ded book & A.
	i) To study working of nested macro.
	is study working of neited macro.
	CALLED AHALLES OF
	Theory:
	to person the on the cotton of the
.	What is main processor:
	~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~ ~
	A quelat purpose maiso processor is a mairo processor
	that is not fied to or integrated with a particular
	language or piece of software.
	A macro processor is a program that copies of stream
	of text from one place to another, making a
	systematic set of replacements as it does so.
	The state of the s
	Macro definition
-	and the second s
	The #define directive specifies a macro identifies and a replacement that and furnisates with a new-line

The replacement list.

preprocessing tokens is substituted for every subsequent occurrence of that macro identified subsequent-list.

Syntax: #define identified & replacement-list or #define adentified (identified list (opt))

#define adentified (identified list (opt))

replacement-list newstine.

Macro call:

A macro call consists of a name optionally followed by an achial-parameter list.

If the macro has no formal parameter list, its call must have no achial parameter list.

+ Javameter-passing

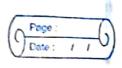

A parameter can be either a simple string or a quoted strong. It can be passed by using the standard method of putting variables into character pools.

you can enter a parameters along with an edit.
main name as principly command by using the
MACRO command.

It is an error to enter pasameter volues for a macro without parameter variables. If you make this mistake, the editor display an error message

	Page:

*	Parameter passing methods in main processor
	Positional parameters
	Reynland panana Leva
iii	Sperifying default value of account
رين	Macra with mixed parameter 1ist
- 11	

Ā.	Positional Parameters
	A positional formal parameter is written as exparameter name > .eg. & SAMPLE is the
	name of a parameter. In a call on a macro using
	positional parameters the cacheal parameter
	specifications is an ordinary etong.
-	
a G	Keyword Parameters
	For hyword parameters, the specification sparameter
	junds is the string "=". The cachal param spectrations
	is written as above stormal parameter name?
	= < ordinary strong >
	& sperfying default values of parameters
-5	E al coild in
	If a parameter has the same value in most calls
	on a mairo, this value can be specified as its
	default value in the macro definition Theelf.
	If a main call does not explicitly specify the
	also of the carameters, the preprotegier will
	its default value; otherwise what uses the value
	sperified in the main call.
	The extended syntax is:
	2 <param name=""/> ( <param kind=""/> ( <default value="">])</default>
רג	Man ill maxed accompleted light:
0-)	Macror with mixed parameter liste!  A macro definition may we use both positional
	11 macro acposition may be to the

Scanned with CamScanner

	· MNT by pass!
	· MOTP med to indicate the next line of text
	to be used during mairo expansion.
	. ALA used to substitute macro call arguments
	for the indexe markers in the stored macro
	defrition.
-	Pase structure of main moversor
3	The assembles specifies that the mains definition should occur anywhere in the program
	should occur anywhere in the program
	So, there can be chances of main call before
	it's definition which gives mire to the torward
	eleveres mablemes of macros.
	due to which macro is divided into 2 passes:
	i) Pars-1: Recognize macro definition, save
	4 macro deforition.
Ç	
	i) Pars-2. Recognize nacro call, pertonn macro
	espansion.
	(1)
The second second
